Batch-27

Question 1:

Prompt : Write a zero-shot prompt (without providing any examples) to generate a Python function that checks whether a given number is a palindrome.

Code:

```
def is_palindrome(num):
    # Convert the number to string
    str_num = str(num)

    # Check if the string is the same forwards and backwards
    return str_num == str_num[::-1]

# Test the function
number = int(input("Enter a number: "))

if is_palindrome(number):
    print(f"{number} is a palindrome.")

else:
    print(f"{number} is not a palindrome.")
```

Question 2:

Prompt: Write a one-shot prompt by providing one input-output example and ask the AI to generate a Python function to compute the factorial of a given number.

Code:

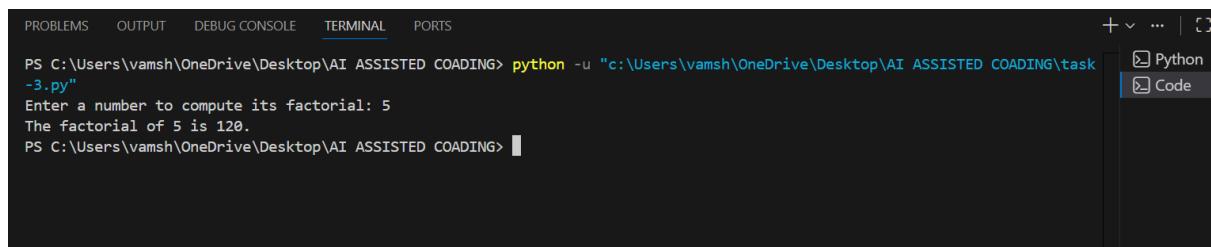

```
def factorial(n):
    if n == 0 or n == 1:
        return 1
    else:
        return n * factorial(n - 1)

# Test the function

Question 6:

#prompt: Write a few-shot prompt by providing multiple input-output examples to guide the AI in generating a Python program that determines whether a given number is even or odd, including proper input validation

Code:

```
def is_even_or_odd(num):
    if not isinstance(num, int):
        return "Invalid input. Please enter an integer."
    if num % 2 == 0:
        return f"{num} is even."
    else:
        return f"{num} is odd."
# Test the function
try:
    number = int(input("Enter a number to check if it's even or odd: "))
    result = is_even_or_odd(number)
    print(result)
except ValueError:
    print("Invalid input. Please enter a valid integer.")

The command `python -u "c:\Users\vamsh\OneDrive\Desktop\AI ASSISTED COADING\task-3.py"` is run, and the output is displayed. The output shows three runs of the script, each prompting for a number and determining if it's even or odd. The sidebar on the right shows two open files: `Python` and `Code`, with `Code` currently active.
